SERVICES

- 4 Color (CMYK) Scanning
- B/W Halftone Scanning
- Duotone Scanning
- Tritone Scanning
- RGB Color Scanning
- RGB to CMYK color conversions

FEATURES, ADVANTAGES AND BENEFITS

■ Flex Pricing

Embassy's three-tier quality approach allows us to provide pricing based on your color expectations.

Preferred Color is used when exact color matching is not required or the original is less than ideal. Our color experts assess the image and use their expertise to provide you with a visually pleasing reproduction.

Optimum Color is used when exact color matching is required. It is ideal when you've invested a lot of effort ensuring photography or original art is exactly to your specifications and you want to maintain that color integrity throughout the reproduction process.

Corrective Color is used when the image requires extensive color correction and the final result is not expected to look like the original. In this approach, color-specific art direction and multiple rounds of proofs are typically required.

■ Scan Proofs

We are one of the few companies able to provide a digital press proof of your scan for final review and approval. This process allows you to make any required changes early in the process without compromising final delivery times or incurring additional production expenses at the final imaging stage.
