

SOLUTIONS

FILE PROCESSING AND IMAGING

your satisfaction. The team approach allows us to become very familiar with your requirements and to eventually act as an extension of your operations.

■ **Bullet-Proof Printer-Ready Files**

Bullet-proofing technology and workflows ensure there are no unpleasant surprises when your job comes off the press. When you send a native PDF file to a printer as is, you run the risk of losing file integrity. Our bullet-proofing system provides the peace-of-mind of knowing the same file that made your approved proof will reproduce with 100% file integrity.

■ **Multiple Raster File Formats and Resolutions**

We can provide bullet-proof, print-ready files in any printer-ready raster format or resolution including Tiff it/P1, CT/LW, and PDF-X1. We have yet to meet a printer that cannot accept our files.

■ **Imposed e-Plates (1 Bit Tiff Files)**

We are one of the few companies in the North America that can impose your job to the printer's specifications and supply the printer with an electronic plate (e-plate). This allows you to view your contract color proofs and digital blueline proof at the same time.
