

Embassy Graphics provides high quality contract and imposition style proofs using various digital and analog based systems. Our commitment to color quality control ensures the proofs you approve will be correct, within SWOP standards, and color achievable on press.

SERVICES

Digital Proofing

- Digital Press Proofs
- Iris Proofs
- Pictro Proofs
- Digital Blueline Proofs
- Remote Proofing

Analog Proofing

- Single Piece Proofs
- Analog Blueline Proofs

FEATURES, ADVANTAGES AND BENEFITS

■ Digital Press Proofs

Our digital press proofing technology is setting new industry standards for quality, turn-around, economy and flexibility. It eliminates most problems long associated with traditional proofing technologies because it's not a proofing device; it's an actual printing press. Digital technology is an ink-on-paper, dot-based system that allows us to proof directly to a your paper stock. Since it is a printed proof, press checks and color matching on press are faster. You get no unpleasant surprises and have to make fewer compromises. Digital press proofs are also more economical to produce than traditional proofs, and you can get multiple copies if required.

■ Asian & Overseas Inkset Proofs

Our color department has spent a great deal of time and effort developing color proofing profiles and tables that match Asian Inksets. In doing so, we are able to provide our North American customers with proofs that they can approve, knowing that overseas and Asian printers can match them on press.
