

SOLUTIONS

DATA MANAGEMENT AND FILE DELIVERY

Embassy Graphics provides leading edge data management and Internet-based file delivery solutions. Our data management and file delivery technology is integrated into the prepress production process to provide fast, user-friendly digital delivery options that improve your desktop productivity.

SERVICES

- **APR/OPI Data Management**
- **Image/File Archiving**
- **Image/File Retrieval**
- **File Transfer to CD/DVD**
- **File Transfer to FTP or Mass Transit**
- **High-Speed Fiber to the Internet**
- **Point-to-Point High-Speed Wireless**

FEATURES, ADVANTAGES AND BENEFITS

■ **Digital File Delivery**

Our high-speed fiber and wireless connections to the Internet closes the traditional distance gap, allowing us to send and receive time-sensitive, large files quickly, easily and inexpensively. Like us, our customers are finding this technology to be highly effective, predictable, extremely flexible and easy to use.

■ **User-Friendly Communications Software**

We use award-winning, easy-to-use Mass Transit software for Internet and file delivery. As part of our licensing agreement, our customers receive a no-cost version of the software along with set-up assistance and user training. Once installed and configured, Mass Transit works in the background automating steps, pre-scheduling your transfers, stuffing files on the fly and keeping a call log of files sent and received.

■ **Automatic Picture Replacement (APR/OPI)**

Automatic Picture Replacement technology reduces hard drive space requirements and speeds screen re-draw, processing and transfer time by providing low-resolution placement files for Images and Copydot files. APR reduces desktop production time at your end and gives you screen resolution comparable to a high-resolution image. Plus, you get uncompromising control over Image or Copydot placement. When we receive your file for processing, our technology automatically swaps the low-resolution file with its high-resolution counterpart.
